

automation has gone into the woods!

Take the mill to the logs • Haul lumber from the woods • The world's most portable sawmill • Sets up for sawing in thirty minutes • A precision built one piece machine • No costly dismantling or reassembling • More features than mills costing three times as much • Proven by twenty years of experience.

with all the
comforts of the
home office

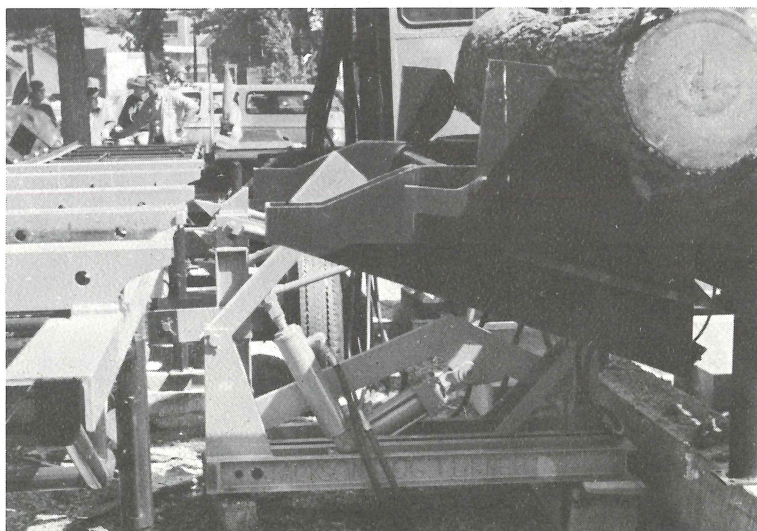

JACKSON . . .

A complete synchronized unit — sawmill — log turner — log deck. All automated with hydraulics.

- Sawyer's full view of operation, as well as log face, for top grade sawing.
- Roller glide headblock carriage (patented).
- Multi-power, positive action networks (patented).
- Multiple selection from 4/4 - 8/4 by Sawyer.
- Hydraulic taper attachments.

Power plus control makes the JACKSON features more versatile and more useable.

Complete automation coupled with complete portability provide the versatility required for top level production — even in remote areas.

IN THE WOODS IT'S JACKSON

**MOVE THE MILL
FROM JOB TO JOB**

High quality hardwood is a natural for the Lumber Harvester because of the ease with which the operator can handle the difficult shaped logs and select the grade lumber from them.

Maximum operator visibility of the entire operation as well as the clear vision of the actual sawing operation provides maximum production and maximum safety.

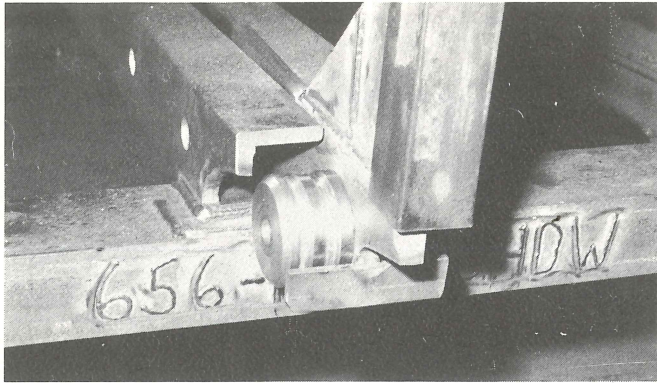

TOTAL PERFORMANCE — THAT'S PRODUCTION

JACKSON HYDRAULIC LOG DECK AND TURNER

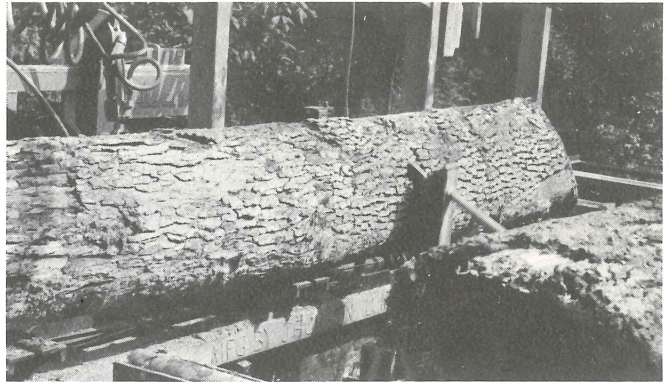

- All-hydraulic power — all sawyer controlled.
- Fast and powerful, with the smooth control necessary for peak performance.
- Up and over eccentric arm JACKSON Log Turner gives top performance on large and small logs.
- Large roller deck chain for longer, smoother operation.

Complete coordinated units are available including Power Units, Edgers, Gang Edgers, Trimmers and Sorting Chains. All Portable.

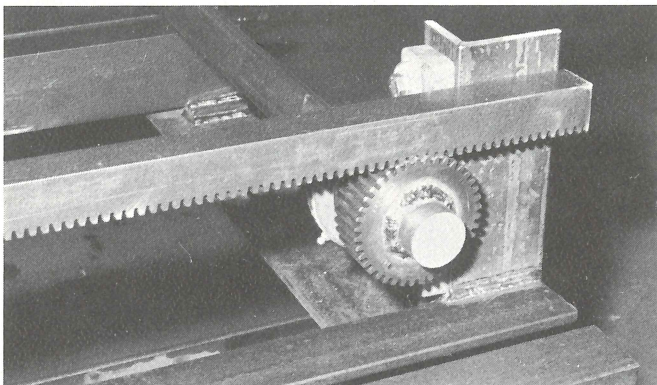

UNIQUE JACKSON FEATURE . . .

The patented "roller glide" headblock reduces friction and improves performance and durability over old-style sliding headblocks.

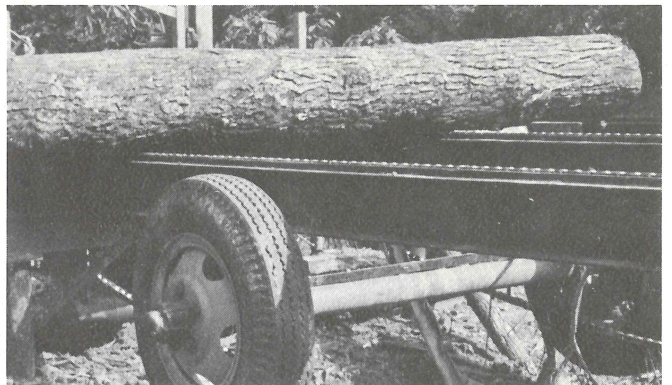

THE JACKSON LOG TURNER . . .

Note the lifting action for smooth easy turning of big heavy logs.

RACK AND PINION . . .

The most durable and most trouble-free system for moving the headblocks. Flame-hardened cut-steel gears. The precision machined gears provide absolute positive motion to the headblocks.

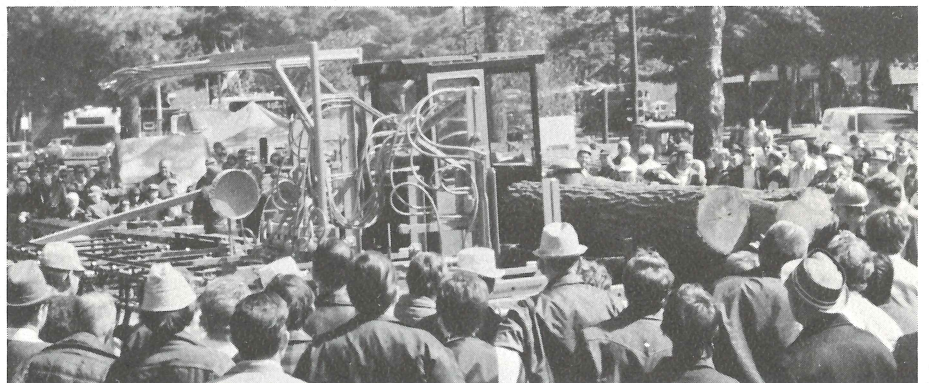

THE JACKSON PORTABLE LOG DECK . . .

Has its own axle and wheels. A complete self-contained unit.

CONSIDER THESE KEY FEATURES OF ALL JACKSON EQUIPMENT!

- All-steel welded construction
- Complete portability
- Proven design
- Maximum production capacity
- Wide variety of options
- Smooth operation
- Rugged durability
- Low maintenance costs

You too should take a look at Jackson Mills — and the entire line of equipment.
