Jackson Sliding Headblock Stationary Carriage

Four headblocks. Main frame is rectangular tubing; headblocks are fabricated from formed steel channel, with sliding headblocks. Headblocks ride on high-density nylon wear strips. All assemblies and wear plates are bolted in place with nuts on the back side. Replacement is accomplished by removing the bolts. Carriage includes two "Tower Dog" bite-type straight line tong dog mechanisms with power up & down and in & out, allowing for infinitely variable tapering. Each dog has built-in turn down and positive stop to prevent it from entering the saw line. Four axles with 10" plastic wheels and tapered roller bearings are standard. There are also four cam follower guide brackets mounted on the carriage that follow the guide rail for a positive guide system. A dial indicator is standard; includes pantograph boom.

38" Opening Carriage

F.O.B. Mondovi, WI -- Installation Not Included

46" Opening Carriage

F.O.B. Mondovi, WI -- Installation Not Included
